The Healthcare Access Crisis

Limited Access

Rural and underserved urban areas lack proximity to healthcare facilities, forcing patients to travel long distances for basic medical consultation.

Overcrowded Hospitals

Hospitals face overwhelming patient loads, resulting in long wait times and reduced quality of care for those who need immediate attention.

Healthcare Confusion

Limited health literacy and awareness leave patients unsure about symptom severity, appropriate treatment paths, and when to seek emergency care.

Intelligent Healthcare, Accessible to All

Our Solution

SwasthAI is an AI-powered healthcare assistant that brings medical guidance to every smartphone, regardless of location or literacy level.

Designed with voice-first interaction and multilingual support, it eliminates barriers to healthcare information and empowers users to make informed decisions about their health.

Available 24/7, accessible anywhere with internet connectivity, and completely free for public healthcare services.

AI-Powered Triage

Smart symptom analysis with severity classification

Voice-First Design

Accessible for low-literacy populations

Multi-Language Support

Bridging communication gaps across regions

Core Features That Transform Care

Smart Symptom Checker

AI analyzes symptoms and classifies urgency into Emergency, Moderate, or Mild categories with appropriate action recommendations.

Voice Interaction

Users can speak naturally instead of typing, making healthcare accessible to elderly populations and those with limited reading ability.

Healthcare Finder

Locates nearby hospitals, clinics, pharmacies, and emergency services with real-time directions and contact information.

Advanced Capabilities for Comprehensive Care

Prescription Scanner

Users can photograph prescriptions and receive clear explanations of medications, dosages, and potential side effects in their preferred language.

Disease Outbreak Alerts

Real-time notifications about local disease outbreaks, vaccination campaigns, and public health advisories relevant to the user's geographic location.

Offline Health Records

Secure storage of personal health information that syncs across devices and remains accessible even without internet connectivity for critical situations.

SwasthAI – Workflow

AI Public Healthcare Assistant

How SwasthAI Works

Technology Stack

Frontend

- Flutter for cross-platform mobile apps
- React Native for web interface
- Material Design for intuitive UX

AI Engine

- Large Language Model for medical reasoning
- Speech-to-Text for voice input
- Natural Language Processing

Backend

- Firebase for real-time data sync
- Node.js for API endpoints
- PostgreSQL for relational data

Integrations

- Google Maps API for location services
- Twilio for SMS alerts
- Healthcare databases

SwasthAI – Technology Stack

Tech breakdown of our AI public healthcare assistant app

Measurable Impact

60%

Reduced Hospital Load

By filtering non-emergency cases through AI triage

3x

Faster Triage Time

Compared to traditional phone consultations

100%

Accessibility

Voice interface enables access for low-literacy populations

- Time Savings

Users save hours by knowing exactly where to go and what severity their condition represents

- Informed Decisions

Patients make better choices about when to seek emergency care versus home treatment

- Rural Empowerment

Remote communities gain instant access to medical guidance previously unavailable in their regions

Future Roadmap

Vision for SwasthAI over the next 4 years

Future Roadmap

Government Integration

Connect with national and state health systems for unified patient records, vaccination tracking, and public health program enrollment.

Wearable Integration

Synchronize with fitness trackers and smartwatches to monitor vital signs, detect anomalies, and provide proactive health alerts.

Telemedicine Platform

Direct video consultations with licensed doctors, prescription management, and remote patient monitoring for chronic conditions.
